Veterinary Report

Date of consultation

11.09.2025

Reason for consultation

Itching and skin reddening

Clinical examination

- General condition: normal
- Behavior: bright, alert and responsive but anxious
- Hydration: physiologically hydrated (normal)
- Body temperature: 38.0 °C (normal)
- Heart rate: 160/min (normal)
- Respiratory rate: 54/min (mildly elevated)
- Mucous membranes: normal, normal capillary refill time
- Body weight: 5.140 kg
- Body condition score (BCS): 5/9 = ideal weight
- Additional findings from the general examination:
 - Oral examination normal
 - Auscultation of heart and lungs normal
 - Abdomen soft and non-painful
 - Femoral pulse strong and regular
 - Both ears reddened, especially the inner side, with pustules on the ear edges, outer side crusted at the ear edge (right > left), itching when rubbed
 - No alopecia, paws unremarkable, abdomen reddened, with small crusts

Diagnosis

Pruritus (at the moment of unknown cause)

Medical treatment at home

- Advocate Spot-on: Antiparasitic treatment; Part the fur at the back of the neck to expose the skin, place the tip of the pipette directly on the skin, and apply the entire contents, allowing the product to dry naturally while avoiding bathing or swimming for 24 hours after application.
- Leniskin foam: Shake the bottle well, apply the foam evenly to the affected areas, massage it gently into the skin against the direction of the fur, let it sit for a few minutes, then brush the coat without rinsing it off.
- Apoquel 5.4 mg: Against itching; Administer 1/2 tablet of Apoquel twice daily until further notice. Monitor for potential side effects such as vomiting, diarrhea, lethargy, or changes in appetite; contact your vet if any unusual reactions occur. Apoquel should not be abruptly discontinued but must be gradually reduced before stopping.
- Please continue the antibiotic treatment as prescribed by the surgical department.

Comment

Gatsby was presented due to acute itching. During the examination, he was in good general condition, and his vital parameters were within normal limits. Redness of the skin, as well as crusts and pustules on the ears, were observed. However, the exact cause of the itching could not be determined during the emergency examination, and a complete dermatological examination is not possible in the emergency setting. Gatsby requires further investigation, ideally a dermatological workup.

He was sent home with symptomatic treatment for the weekend. Please contact us by phone to schedule an appointment for follow-up investigation in the Dermatology department.

If Gatsby's condition worsens over the weekend — for example, if he refuses to eat, appears generally unwell, develops vomiting or diarrhea, or if the itching becomes worse — please contact us or your veterinarian.

Recheck

Please contact us to schedule an appointment for a dermatological workup on Monday, either with us or with another dermatological specialist.

We thank you for entrusting us with the care of Gatsby. Please do not hesitate to contact us in case of questions.

Sincerely,

med. vet. Franziska Kleindienst
